- LINUX_NRPE_LOAD
- LINUX_NRPE_MEMORY
- LINUX_NRPE_PROC
- LINUX_NRPE_ZOBBIE

Service Template Groups

- Linux Basic Monitoring NRPE

ToDo on the linux client

The package `openitcockpit-linux-basic-client` must be installed on the system or be monitored.

```
apt-get install apt-transport-https
apt-key adv --recv --keyserver hkp://keyserver.ubuntu.com 1148DA8E
echo 'deb https://packages.openitcockpit.com/repositories/xenial xenial main' > /etc/apt/sources.list.d
/openitcockpit.list
apt-get install openitcockpit-linux-basic-client
```

After the install the file `/etc/nagios/nrpe.cfg` has to be adapted the following line:

```
...
allowed_hosts=127.0.0.1,<IP of the Monitoring Sat/Master>
...
```

After the change nrpe has to be restarted:

```
systemctl restart nagios-nrpe-server.service
```
