

# EVC Settings

Under "Event Correlations / Settings" you can find the settings for the EVC module.

Field name	Required Field	Description
EVC_CONSIDER_STATETYPE		Whether both the soft and hard states should be taken into account or only the hard state  Off = Soft and hard states  On = Hard state only
EVC_CONSIDER_STATE_COUNT		Should the number of statuses be taken into consideration?  <b>Example:</b> A vService is correlated from four services.  One service has the status Warning, two are Critical and one is Unknown.  Off = vService => Unknown  On = vService => Critical
Monitoring System		Which monitoring system is being used
