

Design (coming soon)

What can I do with the Design module?

You can manually adjust the appearance of the surface or use our templates.

Optionally, the design settings can be exported to a JSON file and imported again.

Import JSON over API

To load a JSON design config file, send a post request to your openITCOCKPIT Server at `/design_module/design/import` with the JSON file and the header "Content-Type: application/json".
